HEALTH INSURER CLAIMS OPERATIONS · 115,529 CLAIMS ANALYSED

Where Does the Time Go?

One channel processes **17.6%** of claims - yet consumes nearly **half** of all processing days. This is the story the data tells.

CHAPTER 1

The Big Picture

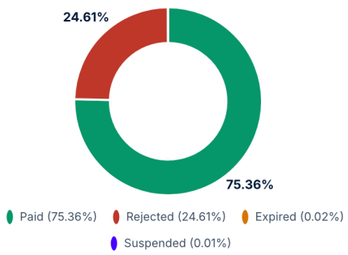
At first glance, the operation looks healthy. Claims are resolved, volumes are managed, and agents are processing.

TOTAL CLAIMS	RESOLUTION RATE	MEAN TAT	SAME-DAY	REJECTION RATE
115.5k	**99.96%**	**5.95d**	**20.77%**	**24.61%**
Jan - Nov 2021	87.1k Paid · 28.4k Rejected	Median 3d · P95 26d	24.0k claims in 0 days	28.4k claims rejected

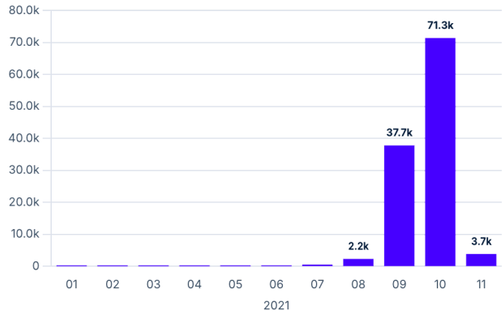
✓ **99.96% resolution rate.**
Only 44 claims out of 115,529 remain unresolved (Expired or Suspended). The operation is completing its work.

How Claims Are Resolved

Expired (27) and Suspended (17) are <0.04% combined - visible on hover



When Claims Arrive - Monthly Volume



> *But resolution rate only tells half the story. The real question is: how long does it take?*

CHAPTER 2

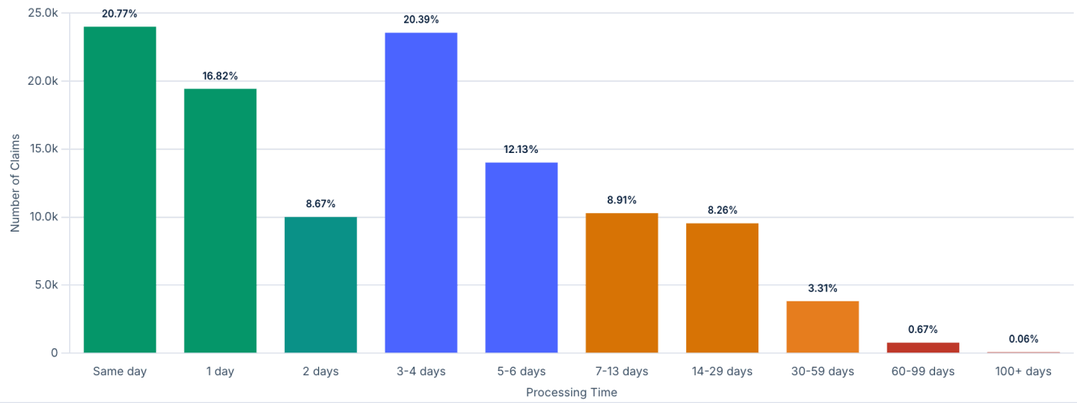
The Speed Story

The median turnaround is just 3 days. But averages lie - the distribution reveals a long, heavy tail.

5.95	3	26	258
MEAN TAT (DAYS)	MEDIAN TAT (DAYS)	95TH PERCENTILE	MAXIMUM (DAYS)

How Long Claims Really Take

Processing days distribution - 20.8% are same-day, but 14.8% take more than 11 days



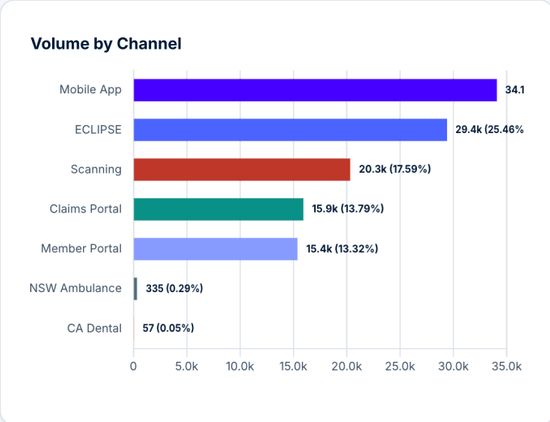
The gap between mean (5.95) and median (3) signals skew.

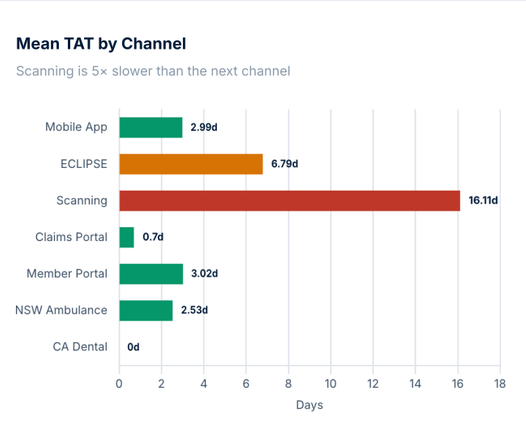
A small proportion of claims are dragging the average up dramatically. Where are they coming from?

CHAPTER 3

The Bottleneck: Scanning

Not all channels are equal. One stands dramatically apart from the rest.





Scanning: 16.1-day mean TAT.

It handles 17.6% of volume but consumes 47.6% of all processing days. Claims Portal processes similar volumes in 0.7 days on average.

CHAPTER 4

Where Capacity Is Consumed

Cross-referencing channels with claim types reveals exactly which combinations are eating the most time.

Channel × Claim Type - % of Total Processing Time

Colour intensity = share of 687,634 total processing days consumed

	ANCILLARY	HOSPITAL	MEDICAL
CA Dental	0% 57 claims · 0d avg	-	-
Claims Portal	0.15% 12,037 claims · 0.08d avg	0.01% 1,845 claims · 0.04d avg	1.46% 2,053 claims · 4.89d avg
ECLIPSE	-	24.84% 21,220 claims · 8.05d avg	4.21% 8,191 claims · 3.53d avg
Member Portal	6.08% 12,374 claims · 3.38d avg	-	0.68% 3,011 claims · 1.54d avg
Mobile App	13.81% 28,631 claims · 3.32d avg	-	1.03% 5,449 claims · 1.3d avg
NSW Ambulance	0.12% 335 claims · 2.53d avg	-	-
Scanning	0.95% 2,845 claims · 2.3d avg	16.41% 7,786 claims · 14.49d avg	30.26% 9,695 claims · 21.47d avg

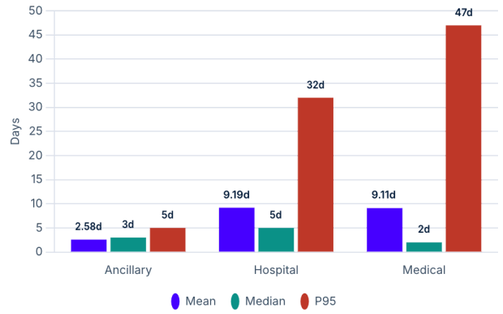
🎯 **Two cells tell the whole story.**
Medical × Scanning (30.3%) and Hospital × ECLIPSE (24.8%) together consume 55.1% of all processing time - despite representing just 15.5% of claim volume.

CHAPTER 5

Not All Claims Are Equal

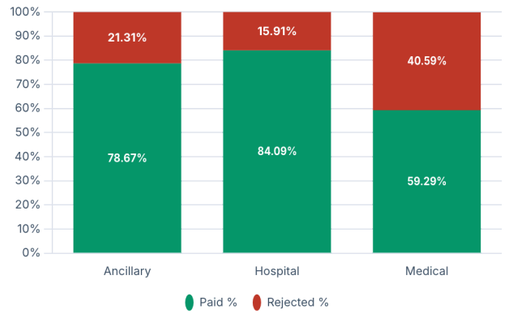
Medical claims take the longest, get rejected the most, and show the widest variance.

TAT Comparison by Claim Type



Rejection Rates

Medical rejection rate is 2.5× higher than Hospital



Ancillary

Volume	56,279 (48.71%)
Mean TAT	2.58d
Median TAT	3d
P95 TAT	5d
Paid Rate	78.67%
Rejected	21.31%

Hospital

Volume	30,851 (26.7%)
Mean TAT	9.19d
Median TAT	5d
P95 TAT	32d
Paid Rate	84.09%
Rejected	15.91%

Medical

Volume	28,399 (24.58%)
Mean TAT	9.11d
Median TAT	2d
P95 TAT	47d
Paid Rate	59.29%
Rejected	40.59%

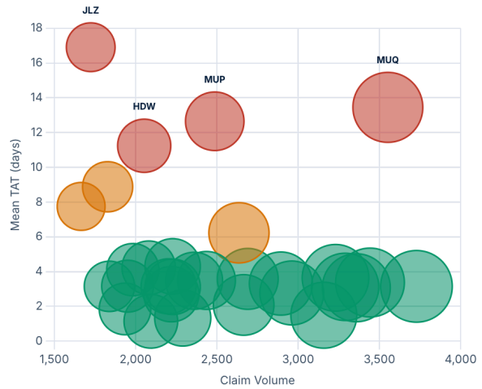
CHAPTER 6

The People Behind the Numbers

242 agents process claims - but performance varies dramatically, partly due to the type of work they handle.

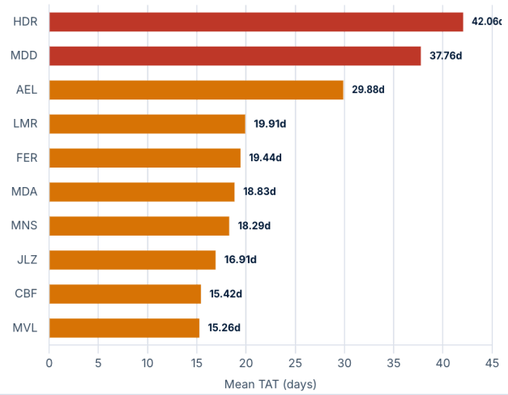
Agent Volume vs. Speed

Each bubble = one agent. Colour = performance tier



Slowest Agents (≥100 claims)

May reflect case complexity, not underperformance



Top 30 Agents - Performance Detail

#	AGENT	VOLUME	MEAN TAT	MEDIAN	P95	CHANNEL	CLAIM MIX
1	JLZ	1,724	16.91d	16d	30d	Scanning

CHAPTER 7

What This Means

Key Finding

The claims operation achieves a **99.96% resolution rate**, but the **mean turnaround time of 5.95 days masks extreme variance**: while the median is just 3 days, the 95th percentile is 26 days and some claims take over 250 days. This right-skewed distribution is driven almost entirely by **two bottleneck combinations - Medical claims via Scanning (21.5-day average TAT, 30.3% of all processing time) and Hospital claims via ECLIPSE (8.1-day TAT, 24.8% of total time)**.

> **Together, these two combinations consume 55.1% of total processing capacity** despite representing only 15.5% of claim volume. This is the single highest-leverage finding in the data.

Areas of Greatest Concern

1. Scanning Channel - The Primary Bottleneck. The Scanning channel processes 17.6% of claims (20,326) yet has a mean TAT of **16.1 days** - more than 5× the next-slowest channel (ECLIPSE at 6.8 days) and 23× the fastest high-volume channel (Claims Portal at 0.7 days). Scanning's P95 TAT is 55 days.

> The Scanning channel contributes **47.6%** of all processing days despite handling only 17.6% of volume.

2. Medical Claims - High Rejection, High Variance. Medical claims carry a **40.6% rejection rate**, nearly double Ancillary (21.3%) and 2.5× Hospital (15.9%). The mean TAT of 9.1 days has extreme variance (std dev 15.8), driven by Medical×Scanning at 21.5 days average.

3. Agent Workload Imbalance. The top 10 agents by volume almost exclusively handle single claim types - 7 of 10 handle only Ancillary claims (≈3-day TAT). Agents HDR (42.1-day mean TAT, 1,031 claims) and MDD (37.8 days, 964 claims) are significant outliers warranting investigation.

Data Quality & Assumptions

- **Processing days verified:** Independently derived from ReceivedDate/ProcessDate - confirmed consistent with the provided field.
- **Expired claims (n=27):** All exactly 95 processing days, exclusively Medical. Auto-expired at a policy threshold. Included in volume but flagged in TAT analysis.
- **Suspended claims (n=17):** Retained - 0.01% of total.
- **Outlier treatment:** 14.8% of claims exceed IQR upper fence (11 days). Retained as genuine operational volume. Median and P95 reported alongside means.
- **Zero-day claims (n=24,000, 20.8%):** Concentrated in Claims Portal (63%) and ECLIPSE (21%) - likely auto-adjudicated. Included in all analyses.
- **Date range:** Jan-Nov 2021. 94% of volume in Sep-Oct 2021. Earlier months likely reflect system ramp-up.
- **Duplicate Client_IDs (45,904 rows):** Expected - members submit multiple claims. No deduplication performed.

Methodology Notes

- **Processing days:** ProcessDate – ReceivedDate in calendar days. Verified against provided field.
- **Resolution classification:** Paid and Rejected = "resolved"; Expired and Suspended = "unresolved".
- **Heatmap metric:** % of total processing time = sum of processing days per channel×type ÷ 687,634 total days.
- **Agent performance:** Shown with claim-type mix and primary channel to enable fair comparison accounting for case complexity.
