HEALTH INSURER CLAIMS OPERATIONS · 115,529 CLAIMS ANALYSED

Where Does the Time Go?

One channel processes **17.6%** of claims - yet consumes nearly **half** of all processing days. This is the story the data tells.

CHAPTER 1

The Big Picture

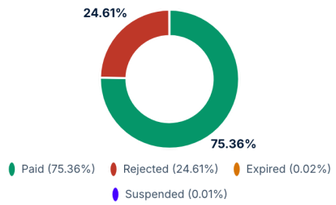
At first glance, the operation looks healthy. Claims are resolved, volumes are managed, and agents are processing.

TOTAL CLAIMS	RESOLUTION RATE	MEAN TAT	SAME-DAY	REJECTION RATE
115.5k	**99.96%**	**5.95d**	**20.77%**	**24.61%**
Jan - Nov 2021	87.1k Paid · 28.4k Rejected	Median 3d · P95 26d	24.0k claims in 0 days	28.4k claims rejected

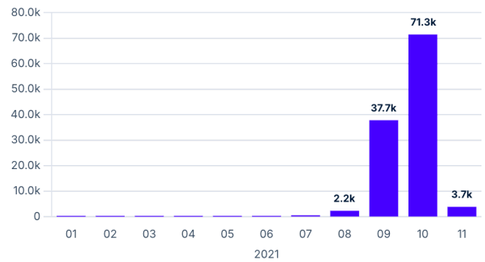
✓ **99.96% resolution rate.**
Only 44 claims out of 115,529 remain unresolved (Expired or Suspended). The operation is completing its work.

How Claims Are Resolved

Expired (27) and Suspended (17) are <0.04% combined - visible on hover



When Claims Arrive - Monthly Volume



> *But resolution rate only tells half the story. The real question is: how long does it take?*

CHAPTER 2

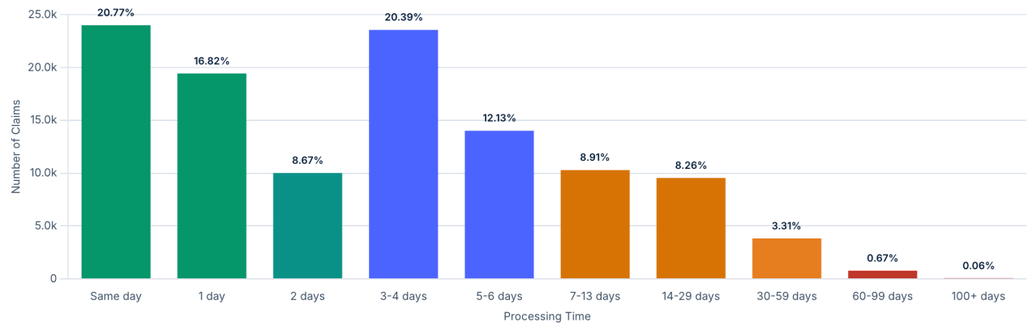
The Speed Story

The median turnaround is just 3 days. But averages lie - the distribution reveals a long, heavy tail.

5.95	3	26	258
MEAN TAT (DAYS)	MEDIAN TAT (DAYS)	95TH PERCENTILE	MAXIMUM (DAYS)

How Long Claims Really Take

Processing days distribution - 20.8% are same-day, but 14.8% take more than 11 days



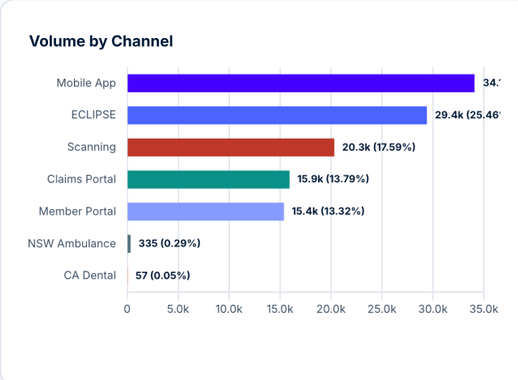
The gap between mean (5.95) and median (3) signals skew.

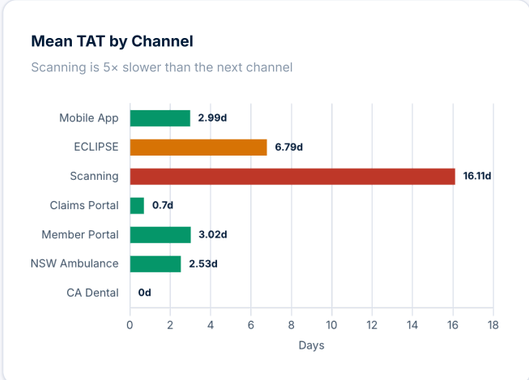
A small proportion of claims are dragging the average up dramatically. Where are they coming from?

CHAPTER 3

The Bottleneck: Scanning

Not all channels are equal. One stands dramatically apart from the rest.





Scanning: 16.1-day mean TAT.

It handles 17.6% of volume but consumes 47.6% of all processing days. Claims Portal processes similar volumes in 0.7 days on average.

CHAPTER 4

Where Capacity Is Consumed

Cross-referencing channels with claim types reveals exactly which combinations are eating the most time.

Channel × Claim Type - % of Total Processing Time

Colour intensity = share of 687,634 total processing days consumed

	ANCILLARY	HOSPITAL	MEDICAL
CA Dental	0% 57 claims · 0d avg	-	-
Claims Portal	0.15% 12,037 claims · 0.08d avg	0.01% 1,845 claims · 0.04d avg	1.46% 2,053 claims · 4.89d avg
ECLIPSE	-	24.84% 21,220 claims · 8.05d avg	4.21% 8,191 claims · 3.53d avg
Member Portal	6.08% 12,374 claims · 3.38d avg	-	0.68% 3,011 claims · 1.54d avg
Mobile App	13.81% 28,631 claims · 3.32d avg	-	1.03% 5,449 claims · 1.3d avg
NSW Ambulance	0.12% 335 claims · 2.53d avg	-	-
Scanning	0.95% 2,845 claims · 2.3d avg	16.41% 7,786 claims · 14.49d avg	30.26% 9,695 claims · 21.47d avg

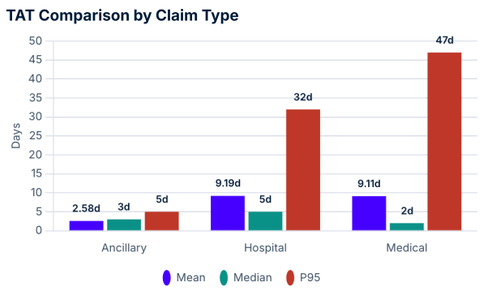
🎯 **Two cells tell the whole story.**

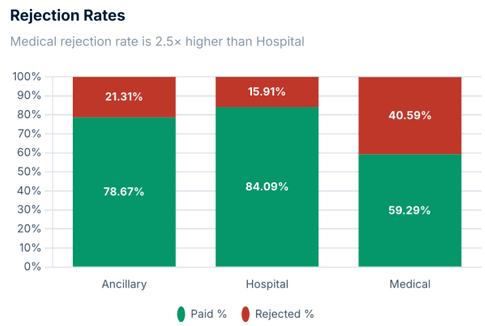
Medical × Scanning (30.3%) and Hospital × ECLIPSE (24.8%) together consume 55.1% of all processing time - despite representing just 15.5% of claim volume.

CHAPTER 5

Not All Claims Are Equal

Medical claims take the longest, get rejected the most, and show the widest variance.





Ancillary

Volume	56,279 (48.71%)
Mean TAT	2.58d
Median TAT	3d
P95 TAT	5d
Paid Rate	78.67%
Rejected	21.31%

Hospital

Volume	30,851 (26.7%)
Mean TAT	9.19d
Median TAT	5d
P95 TAT	32d
Paid Rate	84.09%
Rejected	15.91%

Medical

Volume	28,399 (24.58%)
Mean TAT	9.11d
Median TAT	2d
P95 TAT	47d
Paid Rate	59.29%
Rejected	40.59%

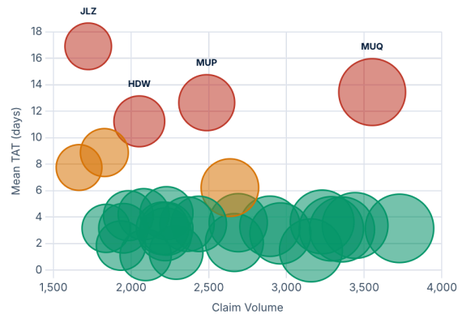
CHAPTER 6

The People Behind the Numbers

242 agents process claims - but performance varies dramatically, partly due to the type of work they handle.

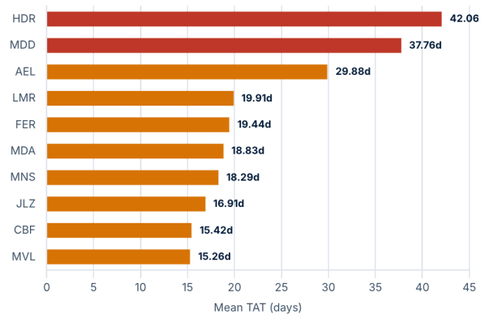
Agent Volume vs. Speed

Each bubble = one agent. Colour = performance tier



Slowest Agents (≥100 claims)

May reflect case complexity, not underperformance



Top 30 Agents - Performance Detail

#	AGENT	VOLUME	MEAN TAT	MEDIAN	P95	CHANNEL	CLAIM MIX
1	JLZ	1,724	16.91d	16d	30d	Scanning	
2	MUQ	3,552	13.45d	14d	28d	Scanning

CHAPTER 7

What This Means

Key Finding

The claims operation achieves a **99.96% resolution rate**, but the **mean turnaround time of 5.95 days masks extreme variance**: while the median is just 3 days, the 95th percentile is 26 days and some claims take over 250 days. This right-skewed distribution is driven almost entirely by **two bottleneck combinations - Medical claims via Scanning (21.5-day average TAT, 30.3% of all processing time) and Hospital claims via ECLIPSE (8.1-day TAT, 24.8% of total time)**.

> **Together, these two combinations consume 55.1% of total processing capacity** despite representing only 15.5% of claim volume. This is the single highest-leverage finding in the data.

Areas of Greatest Concern

1. Scanning Channel - The Primary Bottleneck. The Scanning channel processes 17.6% of claims (20,326) yet has a mean TAT of **16.1 days** - more than 5× the next-slowest channel (ECLIPSE at 6.8 days) and 23× the fastest high-volume channel (Claims Portal at 0.7 days). Scanning's P95 TAT is 55 days.

> The Scanning channel contributes **47.6%** of all processing days despite handling only 17.6% of volume.

2. Medical Claims - High Rejection, High Variance. Medical claims carry a **40.6% rejection rate**, nearly double Ancillary (21.3%) and 2.5× Hospital (15.9%). The mean TAT of 9.1 days has extreme variance (std dev 15.8), driven by Medical×Scanning at 21.5 days average.

3. Agent Workload Imbalance. The top 10 agents by volume almost exclusively handle single claim types - 7 of 10 handle only Ancillary claims (≈3-day TAT). Agents HDR (42.1-day mean TAT, 1,031 claims) and MDD (37.8 days, 964 claims) are significant outliers warranting investigation.

Data Quality & Assumptions

- **Processing days verified:** Independently derived from ReceivedDate/ProcessDate - confirmed consistent with the provided field.
- **Expired claims (n=27):** All exactly 95 processing days, exclusively Medical. Auto-expired at a policy threshold. Included in volume but flagged in TAT analysis.
- **Suspended claims (n=17):** Retained - 0.01% of total.
- **Outlier treatment:** 14.8% of claims exceed IQR upper fence (11 days). Retained as genuine operational volume. Median and P95 reported alongside means.
- **Zero-day claims (n=24,000, 20.8%):** Concentrated in Claims Portal (63%) and ECLIPSE (21%) - likely auto-adjudicated. Included in all analyses.
- **Date range:** Jan-Nov 2021. 94% of volume in Sep-Oct 2021. Earlier months likely reflect system ramp-up.
- **Duplicate Client_IDs (45,904 rows):** Expected - members submit multiple claims. No deduplication performed.

Methodology Notes

- **Processing days:** ProcessDate – ReceivedDate in calendar days. Verified against provided field.
- **Resolution classification:** Paid and Rejected = "resolved"; Expired and Suspended = "unresolved".
- **Heatmap metric:** % of total processing time = sum of processing days per channel×type ÷ 687,634 total days.
- **Agent performance:** Shown with claim-type mix and primary channel to enable fair comparison accounting for case complexity.
